

Solar Turbines Upgrades and Expands Mainsaver Usage at 10 Global Facilities

San Diego, CA, February 21, 2019; Solar Turbines has embarked on a project to upgrade all sites to the Mainsaver 12.9 EAM (Enterprise Asset Management) system for maintenance of manufacturing equipment and facilities. The 12.9 implementation will include the legacy Mainsaver Core module as well as the Mainsaver Connect module which offers browser and app based mobile functionality on virtually any smart device.

The 10 North American and European sites are located in the US, Mexico and the Czech Republic. The Mainsaver Multi-Plant architecture facilitates multiple languages within a single database. Since 1997, Mainsaver has been used for corrective maintenance and preventive maintenance (PM) tasks and also to track the inventory used on these work orders. Solar Turbines is able to monitor the maintenance costs of all equipment by entering time, material and contractor charges on the work orders as they are completed.

Mainsaver Connect provides mobile functionality to the maintenance techs for CMMS functions that were typically done when returning to the workstations at the Maintenance office. This functionality includes the ability to create new work orders, complete assigned work, lookup asset history and issue parts.

Mainsaver Software is providing the services for this expansion including the data services to migrate separate databases into the multi plant structure, server setup and user training.

About Solar Turbines

Solar Turbines Incorporated, headquartered in San Diego, is a wholly owned subsidiary of Caterpillar Inc. Solar manufactures the world's most widely used family of mid-sized industrial gas turbines. More than 15,000 Solar units are operating in 100 countries around the world. Primary applications include electric power generation, oil and natural gas production, and natural gas transmission.
